SMC LAN at Release A

- **Devices on the SMC LAN**
 - **Enterprise Communications Server**
 - **Enterprise Management Server**
 - **Bulletin Board Server**
 - **Management Workstations**
 - **Network-Attached Printers**
- **Enterprise servers will be dual attached to the main FDDI LAN (physical ring not a hub).**
- **The BB server will be on a separate FDDI segment (dual attached) so that traffic to and from the server does not traverse the main SMC segment, and for security.**
- **Workstations and printers will be on dedicated 10BaseT segments off of a 10BaseT Hub that is dual attached to the main FDDI LAN.**
- **Using dual attached nodes on an FDDI LAN enables the SMC network to meet RMA and bandwidth requirements (discussed in the CSS/MSS Sizing Models and HW Design presentation)**
